

Applied Information Technology

"Seeing Technology thru the Users' Eyes"

DEPARTMENT OF MATHEMATICAL AND COMPUTING SCIENCES

About Applied Information Technology

The AIT major is designed especially for students with an interest in technology but with passions in other areas to which information technology can be applied.

The AIT major consists of 33 credit hours of foundation courses and 27 credit hours of courses in a chosen "second discipline".

Current second discipline areas are:

- Anthropology
- Biology
- Communication/Journalism
- Economics
- Mathematics

Additional second discipline areas are planned to be added in the future.

AIT's interactive courses, partner-sponsored internships, team player emphasis, and hands-on experience will equip the student with the skills and experience needed not only to find success after graduation but fulfillment in both career and life beyond the degree program.
